

# USCMS Engineer Status Report for Choose Month

Hans Wenzel

July 18, 2003

## 1 Work Performed This Month

Installed Objectivity DB 7.0 on a redhat 7.3 system (cmsp4). I modified the script to create federations and created a federation using the orca 6 2 3 schema. I could hitwrite, digitse and run analysis jobs (from a remote redhat 6 based system via ams) ok into this federation. I had some users at hopkins trying it out and it went well. So I think it will not be a problem to to use one of the 3ware servers to host a federation.

Wrote examples so that users in pakistan can run single phton production.

## 2 Resources Needed

server to host objectivity federations.
